Summary

Senior Software Development Engineer with 7 years of experience building and scaling React and React Native applications. Currently leading technical execution for the Insurance pod at Jupiter Money. Proficient in JavaScript, TypeScript, React, React Native, and Node.js, with proven success in optimizing performance, reducing costs, and driving user engagement across web and mobile platforms.

Skills

Languages: JavaScript (ES6+), TypeScript, Kotlin, Java, HTML, CSS

Frontend: React Native, React, Next.js, Redux, SVG charts, Canvas, WebView, Tailwind CSS, SCSS, PWA, Animations

Mobile: Android Native Modules, OTA Updates, Mobile Performance Optimization

Backend: Node.js, NestJS, Express, GraphQL, REST APIs, Kafka, Vert.X, AWS (S3, Lambda), Git, Docker, CI/CD, Spinnaker

Architecture: Backend for Frontend (BFF), Microfrontends (Module Federation), FE Architecture Patterns, Atomic Design

Testing: Jest, React Testing Library, Snapshot Testing, Maestro, Detox

Monitoring: Coralogix, Sentry, Firebase, Amplitude

Profiling: Flipper, Chrome DevTools, React Native DevTools, Profiler, Bundle Visualizer

AI-Assisted Development: Claude Code, GitHub Copilot, Figma MCP

Experience

Senior Software Development Engineer | Jupiter Money | Apr 2022 – Present

Insurance Platform

- Led technical execution for the Insurance pod, building a modular component-driven architecture for dynamic forms, configurable quotation flows, and product onboarding journeys
- Decreased vendor integration time from 7 days to under 1 day, while scaling to 5+ providers and serving 2,000+ monthly policies
- Created a frontend abstraction layer to normalize vendor-specific schemas into a unified contract

Transactions Platform

- Architected a full-stack transaction module serving 50,000+ daily users across 15+ payment products
- Planned and executed a Backend for Frontend (BFF) layer using NestJS and GraphQL to aggregate 8+ downstream backend services, simplifying frontend integrations
- Built a reusable modular component registry capable of powering any combination of UIs
- Lowered code duplication by 70%, improved load times, and cut new product integration time from days to a few hours

Personal Finance Management (PFM)

- Built a data-heavy insights module handling 60,000+ transactions, reducing load time to under 1 second, an 80% improvement Applied MMKV caching, virtualized lists, and an in-house charting library, improving performance on low-end devices and reducing crashes by 80%
- Built 'Jupiter Wrapped' with complex WebView to React Native sync, audio lifecycle across story transitions, and a cross-device performance strategy
- Scaled the PFM product to a 400% increase in monthly active users with features including credit card tracking, monthly recap, and budgeting

Core Platform

- Introduced an AI-assisted UI generation workflow using Figma MCP and Claude Code, reducing component development from ~2 days to 30 minutes; sole owner of architecture and context optimization strategy to prevent LLM context exhaustion on large design systems
- Introduced Over-the-Air (OTA) app updates, reducing internal QA cycle time from 4-5 hours to 30 minutes and eliminating manual APK redistribution; extended to production, enabling weekly releases and same-day hotfix deployment, cutting go-to-market time by 2-3 days per release
- Built end-to-end (E2E) mobile testing infrastructure with CI and device farm integration, enabling the QA team to author 1,500+ visual regression tests and achieving 60% coverage, reducing sanity-test cycles from 3 days to 6 hrs
- Led app performance optimization initiatives including contributions to the React Native 0.78 upgrade: tree-shaking, profiled component rendering, removed unused dependencies, decreased bundle size by ~3MB, and enabled new React Native architecture support

Security & Native Integrations

- Built an in-house biometric authentication module in Kotlin using Android Keystore with hardware-backed key generation and HMAC-SHA256 encryption
- Developed a reusable React Native bridge responsible for secure authentication flows for payments and app unlock

Software Development Engineer I | Betterplace | Jun 2019 – Mar 2022

- Built shared frontend infrastructure with a reusable React component library following atomic design principles, a centralized SCSS theming system standardizing UI across products, and OTP authentication flows with IAM integration
- Developed data-intensive analytics dashboards using D3.js with custom animations for visualizing user metrics and operational data
- Contributed to backend systems using Node.js, Vert.x, and Kafka, building high-scale workflows supporting 3 microservices

Software Engineer Intern | Cognizant | Feb 2019 – Mar 2019

- Completed a 3-month Java training program building a full-stack training management system with course creation, enrollment, and assessment features using servlets, JSP, JDBC, Oracle

Education

B.Tech in Electronics & Communication Engineering (ECE) 2015 – 2019

Jaypee University of Engineering & Technology | CGPA: 8.2 / 10

Achievements

- Recognized at Jupiter Money for leadership in AI tooling and mobile performance initiatives
- Runner-up at Jupiter's internal Spark Hackathon for building a CIBIL Credit Report Tracker within the PFM ecosystem end-to-end in 48 hours
