SUMMARY

Frontend engineer with around 6 years of experience in building mobile-first consumer products in fintech. I primarily work with React Native and enjoy solving problems around performance, scalability, and frontend architecture. Over the years, I've owned and shipped critical user journeys across payments, analytics, and platform features, working closely with product and design to deliver reliable, high-impact experiences.

SKILLS

Frontend: React Native, React, JavaScript (ES6+), TypeScript, HTML, CSS, SCSS

Backend & Platform: Node.js, Java, Vert.x

Testing & Quality: Maestro, Detox, React Testing Library, CI integration

Tools: Git, GitHub, Jira, Confluence, Figma

WORK EXPERIENCE

JUPITER

SDE - 2

Bangalore

Apr 2021 – Present

- Currently **independently leading the Insurance pod**, owning technical execution, roadmap delivery, and building scalable frontend systems supporting onboarding of multiple policies and vendors.
- Architected PFM systems with interactive financial graphs, client-side caching, and a transactions list built for large datasets, infinite scroll, and complex user-driven filters, combined with a move to an in-house charting library, these improvements **reduced landing load time from ~5s to ~1s**.
- Took initiative of integrating OTA updates via Revopush, enabling faster iteration with weekly releases and **cutting go-to-production timelines by 2–3 days**.
- Owned critical payments modules, including pre-transaction EMI conversion for credit cards and UPI payment flows.
- Led development of a platform-level Transaction Details module **reused across 15+ products and serving ~50K daily active users**, with built-in A/B experimentation support.
- Drove frontend reliability initiatives, including Maestro-based automation, enabling a ~800-test CI-integrated sanity suite and **reducing manual QA effort by ~3 days per release**.
- Hands-on contributor to React Native platform **upgrades (0.72 → 0.78)**, with experience handling breaking changes and library compatibility issues.
- Built a secure **in-house biometric** authentication library in Kotlin supporting PPI payments and app unlock flows.
- **Designed and prototyped** a Credit Score Tracker feature end-to-end during a hackathon, later productionised and adopted by ~3K MAUs.

BETTERPLACE

SDE - 1

Bangalore

Jun 2019 – May 2021

- Early member of the **platform team**, building **core shared modules** used across multiple products.
- Led a major **frontend refactor**, establishing an **atomic, component-driven architecture** and a reusable React component library.
- Designed a **centralised theming system (SCSS)** to standardise UI across applications.
- Built **OTP-based authentication flows** and integrated an in-house **IAM solution** across web products.
- Developed **data-intensive dashboards using D3.js** with custom animations.
- Contributed to backend systems using **Node.js, Vert.x, Kafka**, including high-scale workflows supporting 3 services.

COGNIZANT

SDE Intern

Pune

Feb 2019 – Mar 2019

- Completed a 3-month intensive training and internship program in **Java and core enterprise libraries**, involving daily coding exercises, weekly evaluations, and a final assessment.
- Built a **training management system** as the capstone project, enabling instructors to create courses and quizzes, and students to enrol, consume content, and attempt assessments.
- Implemented the system using **HTML, CSS, Bootstrap, Java Servlets, JSP, JDBC, and Oracle 11g**, covering both frontend and backend fundamentals.

EDUCATION

Jaypee University of Engineering & Technology

BTech in ECE - CGPA 8.2

Guna, MP

July 2015 - Mar 2019
